

PRESS RELEASE 2015 – 20 May 2015

Teleste at ANGA COM 2015: How to make your network operations lean?

Network operators are challenged by consumer demand for faster broadband connections and Internet services. Meeting the demand requires constant improvement of networks for more capacity and service reliability. Teleste's Network Services help operators achieve this target in a fast and lean way.

TURKU, FINLAND – 20 May 2015 – Teleste, an international technology company that develops and offers video and broadband technologies and related services, will highlight its professional Network Services offering for cable and telecom operators at ANGA COM 2015. We will showcase our country operations in the UK, Germany and Finland, and highlight how we are able to deliver additional value to operators and their businesses.

"In the mature European broadband market, intense competition, changing consumer habits and adaptation of new technologies are the prime movers for operators to look for new growth strategies. In addition to developing new services, a key question is how services operate and perform", said Andree Kang, Senior Vice President of Network Services for Teleste. "Instead of running network operations alone, operators can greatly benefit from partners that can add value to the operative chain and turn practises into standards and proven business models."

Our proven approaches to enhance performance and reduce costs in the network lifecycle

Constant improvement, effective maintenance and well-planned upgrades are the way to keep networks fit for the increasing service requirements. However, many operators today are faced with the fact that focusing on the network upgrades, operations and maintenance consumes valuable resources that would otherwise be directed toward developing new services for the subscribers.

Teleste takes up the challenge and provides European cable operators with dedicated solutions for lean network management and upgrades. Our services include professional engineering, design, project management, planning and installation, as well as network operation centre (NOC) activities and consulting. Our offering covers the entire network lifecycle.

Alongside with our customers, we strive for continuous development as well as defining pathways and proven processes that deliver extra value to our customers' operations. **If you are interested in how we do this, we welcome you to attend to our case presentations at ANGA COM 2015 in Cologne, Germany, June 9-11.**

A detailed schedule and location of the presentations will be available at www.teleste.com/anga2015 as well as at our stand, E19, during the event. No booking is required for the presentations, but if you wish to confirm your seat in advance, or want more information, [please contact us](#).
