Installation Instructions

Warning! Ensure to follow basic safety precautions to reduce risk of fire, electrical shock, and personal injury.

Warning! Never look directly into the end of a fibre or a fibre connector that may be carrying laser light. Laser light, visible or invisible, can seriously injure eyes or even cause blindness.

Thank you for purchasing this Teleste product. Please take a moment and carefully read these instructions through before installing the product.

General Preparations and Precautions

1. Check the Fibre Outlet, cable items and all other components for any damages before installation.
2. Make sure to keep all components dry and clean for the installation.
3. Keep the working environment clean (dry and no dust) and flat for the installation.
4. Standard instruments and tools should be used during the installation.

Fibre Routing

Figure 3 illustrates the the preferred method of routing the fibres. The method protects the fibres and maintains a proper bend radius.

Installation Guidelines

1. Push on the front side of the box, open the cover. See Picture 1 through 3.

Picture 1

All necessary safety instructions must be followed during the installation and maintenance operations. The safety requirements for class 1M lasers are detailed in EN60825-1.

Picture 3

- 2. Remove the plastic clips covering the cable entry, see Picture 4 and 5.

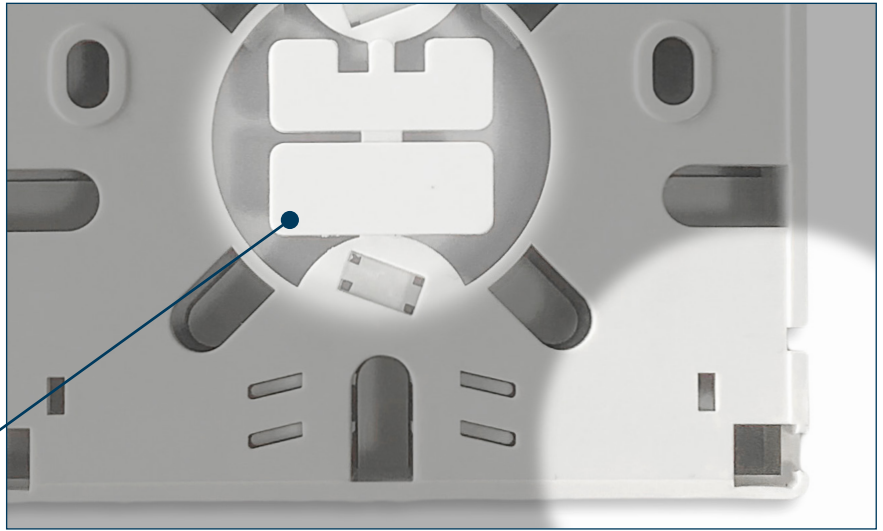

Picture 4

Note! Ensure that the work area and the tools are kept clean and free of dust. Negligence may degrade the fibre strength and cause increased splice losses.

Note! Unused adapter openings may be sealed using the 'Entrance Covers' shown in Picture 5.

Picture 5

- 3. Install adapter(s) into the outlet, see Picture 6.

Picture 6

- 4. Install the 0.9 mm pigtail into the adapter, thread the pigtail through and route around the radius limiters as illustrated in Picture 7.

Picture 7

Note! Take extra care not to damage the fibres. Imperfections like e.g. scratches can initiate a crack. Use a standard fibre stripper designed for the appropriate cable diameter.

Note! Make sure to secure the incoming fibre cable with a cable tie. Care should be taken not to overtighten, since it can damage and deform the fibres and may attenuate and reduce the performance of the optical cable.

Note! Optical fibres should not be damaged. Cut the damaged fibre, and re-strip the fibre if an accident occurs.

- 5. Fix the incoming cable into the outlet using a cable tie, see Picture 8. Alternative cable entry methods are presented Picture 9 and 10.a-b.

Picture 8

- 6. An alternative cable entry method is for the cable to enter the outlet from the rear side. Remove the adapter entry covers and bring the cable through the hole of the backplate. Secure the cable with cable ties as shown in Picture 9.

Picture 9

- 7. Yet another cable entry method is for the cable (method supports up to 7 mm cable) to enter the outlet through an adapter opening. See Pictures 10.a and 10.b how to fix the cable and cover the opening using an entrance cover.
